

Independent Test Shows XanGo® Juice Free of Athletic Banned Substances

ConsumerLab.com distinguishes mangosteen market leader as natural product with “zero tolerance” for masking agents, stimulants and other compounds banned by WADA

LEHI, UT— September 5, 2006 — XanGo® Juice, recognized creator of the mangosteen supplement category, has been confirmed as a product that does not contain any World Anti-Doping Agency (WADA) banned substances by ConsumerLab.com, a leading independent tester of health, wellness and nutrition products.

ConsumerLab defined XanGo Juice as a “zero-tolerance level” product, distinguishing the mangosteen market leader as a dietary supplement with no detectable diuretics, masking agents, beta blockers or related banned substances.

"As ConsumerLab's rigorous testing shows, XanGo Juice is all about delivering the power of the mangosteen through a propriety whole fruit formula free of substances banned in athletic competition. We are committed to leading the global market by producing the world's best mangosteen beverage as nature intended," said XanGo's Chief Marketing Officer Gordon Morton.

XanGo, LLC voluntarily requested that ConsumerLab.com evaluate its internationally acclaimed XanGo Juice. After numerous tests, ConsumerLab declared XanGo Juice free of all banned substances, including masking agents and stimulants.

ConsumerLab serves consumers and healthcare professionals through its independent evaluations. The certification company allows companies to voluntarily test their products for potential inclusion in its list of Approved Quality Products which may bear the ConsumerLab Seal.

ConsumerLab has published XanGo's test results on its Web site, www.ConsumerLab.com.
